

Let's keep our focus on the research

In Memory of Cali - March 6, 2011

The researchers are now sequencing genes using second generation technology in the area of the chromosome where they had their first significant hit. Help keep the focus on finding the epilepsy genes by donating a blood sample and making a donation to support the research. Blood is needed from dogs 10+ years old that have never had a seizure to serve as controls and from affected dogs! If you own an Aussie that has idiopathic epilepsy please send in a blood sample on your affected dog for Dr. Patterson's research at the University of Minnesota.

Focus on the research. Samples are needed from Affected dogs! In Memory of Cali, a shelter dog with epilepsy who was adopted and loved by her forever family until cluster seizures took her away.

Toby's Foundation - Making Tracks to Defeat Canine Epilepsy!
